EXPERIMENT	BET	SETUP & BAR	RESULT	CALL / LEARNING
Creators + purchase-to-enter giveaway (SMASH x talabat), May–Jul 2026	Creators plus a cashback draw tied to purchase move sell-out, not just reach.	Control: Befit, same platform and weeks, no campaign. Bar: lift well above control.	**Daily sales +165% (units +170%) vs +4.7% for the control. Still about 2x baseline after the campaign.**	Report incremental sales against a control, never reach.
Google Ads vs Meta budget	Search earns its share of the paid budget.	Break-even ROAS per brand and channel, net of marketplace commissions. Bar: above break-even.	**Google's return did not cover the cost.**	Stopped Google; moved the budget to Meta.
Influencer agency report audit (3 waves, 103 creators)	The agency's reach and 'unique accounts' figures are reliable enough to plan on.	Read the agency's report line by line, creator by creator, across the three waves.	**Reach estimated from followers, not measured; one creator 5x apart between waves; unique accounts double-counted. Micro-creators (<20K) at 10–40x the campaign average.**	Negotiated –30% with the agency; 103 creators delivered vs 75 contracted.
Giveaway vs promoted reel for follower growth (@eurocake.ae)	A giveaway grows a brand account more cheaply than paid promotion.	Cost per net new follower, compared with a promoted reel.	**AED 0.73 per net follower, 8x cheaper than the promoted reel.**	For follower growth, the giveaway beat paid promotion 8x on cost.
Web store conversion (Shopify)	Reviews, bundles built from real baskets and a replenishment reminder lift orders.	Basket analysis first: 73% of orders already had 2+ products. Read: Q1 vs Jun–Aug 2026.	**Retail web orders +86%, revenue +57%.**	Not isolated: three changes shipped together, so the lift is shared between them.

Figures from DoFreeze's sales data (talabat, Noon, Shopify) and Meta Ads Manager, shown as percentages and unit costs. Happy to walk through how each one was measured.
