Dear Hiring Manager,

The Marketing AI & Analytics Lead role reads like the job I've been quietly building for myself. Its dual mandate — own the marketing data and analytics ecosystem, and embed practical AI and automation into everyday marketing — is exactly the intersection I work at today. At DoFreeze in Dubai I don't just report on marketing performance; I've built the AI system that generates the reporting, and I'd love to do that at platform scale for a fast-growing Dubai tech business.

On the AI-and-automation half, I have the rare, tangible track record you're asking for: I built a generative-AI system (Claude/GPT) that embeds agentic workflows into our marketing operations — automating campaign planning, market research, content and KPI reporting — which cut manual workload roughly 40% and collapsed multi-day processes into same-day ones. On the analytics half, I own end-to-end performance reporting: funnel dashboards (traffic, conversion/CRO, retention, ROI, ROAS, sell-out) in Power BI, Tableau and Looker that link marketing spend to commercial outcomes. At Alibaba's Miravia I ran this discipline daily — analysing conversion, traffic, retention and ROI to grow 42 accounts +30% GMV QoQ, reporting the channel P&L to the CEO — and at Glovo and Mondelez I built the sell-out and performance analysis leadership steered by.

I want to be straight about fit rather than oversell. My core strength is the applied-AI and commercial-analytics side — building tools, dashboards and recommendations that move the business — plus performance marketing across Meta and Google and CRM/EDM. Where I'd be learning fast is the most specialised BI vocabulary in the posting: formal attribution modelling, incrementality testing and mobile measurement partners are adjacent to what I do (funnel analysis, ROI/ROAS, conversion) rather than my day-to-day today. Given my analytical, build-a-solution mindset — and that I'm the kind of marketer who automates her own reporting — I close that gap quickly. I'm also already in Dubai on a residence visa, so I can start on-site immediately with zero relocation.

I'd welcome the chance to walk your team through the AI reporting system I built and how I'd stand up a single source of truth and an automation roadmap for this platform. I'm based in Dubai and available immediately. Thank you for considering my application.

Best regards,

Paula De Francisco Pérez
