

Key Account Growth Lens — Talabat Restaurant Partnerships

Three observations on maximising value from key restaurant accounts, from someone who works the platform brand-side.

Prepared by Paula De Francisco Pérez · 19 June 2026 · For: Key Account Manager at Talabat (Delivery Hero)

1. Account segmentation drives where the growth actually is

Finding: Key restaurant partners are not homogeneous — a few accounts drive a disproportionate share of GMV, and they each have different growth levers (menu, pricing, visibility, ops reliability).

Insight: A flat 'grow every account' plan spreads effort thin; segmenting accounts by GMV potential and primary lever concentrates the manager's time where it compounds.

Recommendation: Build an account tiering grid (GMV potential × primary lever) and a quarterly plan per top account — the same 42-account discipline I used at Miravia to deliver +30% GMV QoQ.

2. Data and dashboards as the negotiation currency

Finding: Partner conversations stall when they are opinion-led; they accelerate when the manager brings the partner's own sell-out, conversion and operational data.

Insight: A shared dashboard reframes renewals and commercial terms from haggling into a joint growth conversation backed by evidence.

Recommendation: Stand up a simple per-account KPI dashboard (GMV, conversion, prep time, promo ROI) and lead every review from it — I ran exactly this ROI/ROAS/conversion analysis cadence at Miravia and Glovo.

3. Cross-functional execution is where account plans live or die

Finding: Account growth depends on marketing, product, operations and finance moving together — a promo without ops readiness or visibility falls flat.

Insight: The KAM who can orchestrate cross-functional delivery turns account plans into realised GMV rather than slideware.

Recommendation: Run each major account initiative as a small cross-functional project with clear owners and a measurement plan — I led cross-functional teams across marketing, logistics and support at Glovo to lift order volume.

These are outside-in observations; with Talabat's account data I'd refine them quickly. They reflect how I run key accounts — segment by potential, lead with data, and orchestrate cross-functional delivery.
